

ATF Dexron II D

DESCRIPTION

ATF Dexron II D is a hydraulic fluid for automatic transmissions and hydraulic clutches for which a Type Dexron D automatic transmission fluid has been specified. ATF Dexron II D also guarantees perfect operation of hydraulic transmissions even under extreme running conditions and when exposed to large temperature fluctuations. Numerous vehicle manufacturers use ATF Dexron IID as a hydraulic fluid for, e.g. power steering systems which have to work under the severest running conditions.

PROPERTIES

- excellent viscosity/temperature properties
- outstanding wear resistance and effective frictional characteristics
- good low-temperature properties
- very high stability to aging and high chemical resistance
- highest thermal stability
- outstanding corrosion protection

PRODUKTINFORMATION

APPLICATIONS

ATF Dexron IID is used in automatic transmissions and manual transmissions, in torque converters and numerous power steering systems in accordance with the specifications and operating instructions specified by the motor vehicle and transmission manufacturers.

APPLICATION

The instructions from the unit or automobile manufacturer must be followed. Miscible with commercially available Dexron IID type ATF oils. However, the optimum performance is only guaranteed when the product is used on its own.
